

You don't need to replace your 1GbE infrastructure to enjoy the benefits of a 10GbE SAN

RELDATA's 10GbE 9240 Unified iSCSI Storage Systems provide customers with a clear alternative to Fibre Channel Storage Area Networks (FC SAN). With the high cost, complexity, scalability and oppressive licensing requirements of conventional FC SAN implementations, the option for 10GbE connectivity will eliminate the pain of rapid storage growth for companies that are constrained by speed limitations of the existing 1GbE-oriented infrastructure.

Implement a blazing fast, powerful RELDATA iSCSI SAN today and migrate to a unified storage infrastructure whenever you want. Immediately start replicating data to a remote SAN hundreds of miles away by purchasing a license for WAN replication. Add non-disruptive block data migration services, file data migration services, and more, whenever you want.

Benefits of a RELDATA 10GbE Solution:

- Gain Highly-scalable, bottleneck-free architecture
- Experience performance exceeding 4Gb/8Gb FC SAN
- Enjoy unrivaled price-performance and modular scalability
- Operate seamlessly within your existing Ethernet infrastructure and your existing storage infrastructure
- Drive down your total cost of ownership

Investing in a RELDATA storage solution makes Storage Growth Simple!
